CS2365-OOP-Project Part 1
Summer 2025

Customer Order System (COS)

Part 1:

Submit: Document with UML diagrams included, all necessary Java files.

- Design your classes
- UML Diagram of classes
- Java files for each of your classes

What is NOT due in Part 1: The demo program that uses each of your classes and demonstrates the use cases

Grading Rubric

General Instructions

- Confirm classes are described in a UML diagram with correct notation
- Confirm that classes have been implemented in Java
- Confirm that code includes appropriate Javadoc notation
- Confirm that the main components of the project have been implemented.

Evaluation Criteria (150 points)

UML Class Diagrams (60 points)

- Correct use of UML Notation (20 Points): Class names, attributes, methods, access modifiers (- private, + public)
- Completeness (20 points): All necessary classes for the given use cases should be included. There is flexibility here, but use the list below as a guide.
- Relationships (20 points): Appropriate use of relationships such as inheritance, association, and aggregation.

Java Implementation (90 points)

- Class definitions and Structure (30 points): Correct implementation of classes and their attributes. Proper encapsulation (private attributes, public methods)
- Methods implementation (30 points): Methods should be implemented according to the use case sequences. Correct handling of alternative sequences
- Validation and error handling (20 points): Proper validation for inputs and correct error handling as per alternative sequences
- Code quality and documentation (10 points): Code should be well-organized and readable. Javadoc comments must be included.
