CS2365-OOP-Project Part 2
Summer 2025

Customer Order System (COS)

Part 2:

Submit: Document with UML, README.txt files included, all necessary Java files.

- The demo program that uses each of your classes and demonstrates the use cases.
- UML Diagram of classes (If there are any updates compared to the previous version, please describe them in the README.txt file.)
- Java files for each of your classes (Includes the entire Part 1 along with the latest updates, including the console application section.)

Grading Rubric

General Instructions

- Review all the general instructions of Part 1.
- Confirm that the README.txt file has been revised and contains all needed information.
- Confirm that the console application runs successfully before submitting.

Evaluation Criteria (100 points)

README.txt (20 points)

- Explains how to run the program (10 Points): The information in the README.txt file should be presented in a clear, logical, and hierarchical structure to ensure easy readability and understanding.
- Demonstrate the use cases and all updates (10 points): All the latest updates to the project, including but not limited to the URL section, should be thoroughly documented in detail.

Console Application (20 points):

- Explains how to run the program (10 Points): Instructions provided in the console must be clear and meaningful.
- Running (10 points): The program runs smoothly without any errors or warnings.

Java Implementation (60 points)

- Class definitions and Structure (20 points): Classes, attributes, and methods are consistently designed in accordance with the previously created UML diagram.
- Java files of implemented Classes (10 points): The Java files are created corresponding to the designed classes and are named accurately and systematically.
- Java files of Console Application (10 points): The Java console files are created in accordance with the use cases that have been described.
- Validation and error handling (10 points): Proper validation for inputs and correct error handling as per alternative sequences.
- Code quality and documentation (10 points): Code should be well-organized and readable. Javadoc comments must be included.
